Legenda:

Gtot (Class 4: gtot < 0,10 | Class 3: 0,1 ≤ gtot < 0,15 | Class 2: 0,15 ≥ gtot < 0,35)

UPF = Ultraviolet Protection Factor

In de context van stoffen geeft UPF (Ultraviolet Protection Factor) aan hoe goed een stof beschermt tegen de zon.

Hoe hoger de UPF-waarde, hoe minder UV-straling er door de stof heen komt. Bijvoorbeeld:

UPF 80 blokkeert 98,75% van de UV-stralen, wat betekent dat slechts 1,25% erdoorheen komt.

UPF 50 blokkeert 98% van de UV-stralen, wat betekent dat slechts 2% erdoorheen komt.

UPF 30 blokkeert ongeveer 96,7% van de UV-stralen.

Ral; onze kleuren komen niet exact overeen met de RAL-kleurenkaart, we bieden u de meest gelijkende tint aan.
